SECRET

INTRODUCTION

This paper provides estimates of the consumption of petroleum products by the military forces of the Communist countries for the years 1962 and 1963. Previous papers in this series were:

- 1) EIC-PSC-WP1, 1 April 1956 for the years 1950-1955.
- 2) EIC-PSC-WP2, 1 March 1958 for the years 1956-1957.
- 3) EIC-PSC-WP3, 1 March 1960 for the years 1958-1959.
- 4) EIC-PSC-WP4, 1 April 1962 for the years 1960-1961.

No attempt has been made to revise the estimates contained in these earlier studies.

In this paper the following distinctions are made: Communist countries include the Soviet Bloc (USSR, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland and Rumania); the European Satellites (the foregoing exclusive of the USSR); Far Eastern Communist countries (Communist China, North Korea, and North Vietnam); and Other Communist countries (Albania and Mongolia). Data are not included for the military forces of such Other Communist countries as Cuba or Yugoslavia.

The estimates of consumption of petroleum by the military forces of the Communist countries were developed by the Defense Intelligence Agency. The estimates presented in this paper were derived from calculations based on probable numbers and types of equipment, the estimated use thereof, and the consumption of petroleum per unit of time or distance.* The assumptions made, and methodology used, to derive the estimates for this paper are essentially the same as for WP-3, 2, and 1.

The estimates of consumption of petroleum by the Army (Tables A-1 through A-9), Navy (Tables B-1 and B-2), Air Forces (Tables C-1 through C-6), and Soviet Strategic Rocket Forces (Table D-1) of the Communist countries for the years 1962 and 1963 are summarized in Table 1.** Estimates of consumption, by country and by type of petroleum product are summarized in Table 2. In this paper, as in WP4 and WP3, the estimates of consumption of petroleum by Naval Air Forces of the Communist countries were included under Naval Forces. In WP2 and WP1, such estimates were included under Air Forces.

Notable reductions in the estimates of consumption for 1962 compared to 1961 have occurred in the estimates for the consumption of aircraft fuels, particularly jet fuels, by the Air Forces of the USSR. The lower estimates are attributed to:

- a. Reduced estimate of fuel consumption rates,
- b. Reduced estimate of Long Range Aircraft routine flight time,
- c. Reduced estimate of Air Order of Battle.

The paper was prepared under the sponsorship of the Economic Intelligence Committee Subcommittee on Petroleum to meet a designated research deficiency and is designed to serve members of the intelligence community in the preparation of petroleum supply/demand studies of Communist countries.

* The estimates of consumption represent the best available information as of 1 January 1964.

** In Tables 1 and 2 all data have been rounded to three significant digits; in Tables A-1 through D-1 all data have been rounded to the nearest hundred. Because of rounding, components may not add to the totals shown in all tables.
